

Listing of Claims

1-26 Canceled

27. (Currently Amended) A mobile terminal with a caller identifier, comprising:

a caller identifier detecting unit in the ~~[[a]]~~ mobile terminal in a mobile communications system which detects the ~~[[a]]~~ caller identifier from an input data and receives a first caller information transmitted through ~~along~~ a radio channel ~~if the caller identifier corresponds to its own caller identifier;~~

a signal processing unit which processes and outputs the first caller information ~~received by the caller identifier detecting unit;~~

a control unit which controls storage and output of the processed first caller information;

a memory which stores the processed first caller information from the signal processing unit under the control of the control unit;

a display unit which displays the caller information output from the signal processing unit under the control of the control unit, ~~wherein the caller information includes picture information transmitted along the radio channel if the caller identifier corresponds to its own caller identifier; and~~

a transmitting unit which transmits a second caller information through the radio channel, wherein the first and second caller information includes a first and a second picture information respectively, and wherein the signal processing unit

comprises a picture information processing unit that processes the first picture information.

28. Canceled

29. (Currently Amended) The terminal of claim 27, further comprising:

a picture size converting unit which converts the ~~caller~~ first picture information or the second picture information to a predetermined size.

30-69 Canceled

70. (New) The mobile terminal of claim 27, wherein the first and second picture information includes a still picture or a moving picture.

71. (New) The mobile terminal of claim 27, wherein the first and second call information further includes a first and a second audio information respectively, and wherein the signal processing unit further comprises an audio information processing unit that processes the first audio information.

72. (New) The mobile terminal of claim 71, wherein the first and second caller information further includes a first and a second character information respectively, and wherein the signal processing unit further comprises a character information processing unit that processes the first character information.
